Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

# Mathematics Methods for Computer Science

Instructor: Xubo Yang

SJTU-SE DALAB

Motivation

Representing Numbers

**Exotic Representation** 

Error

Practical Aspects

Reference book: Solomon, Justin. Numerical Algorithms. Published by AK Peters/CRC Press, 2015.

Mativation

Representing Number

**Exotic Representation** 

Error

Practical Aspects

# Topics I

- Numeric
  - Stability and error analysis
  - Floating-point representation
- Linear algebra
  - Guassian elemination and LU
  - Column space and QR
  - Eigenproblems
  - Applications
- Root-finding and optimization
  - Single variable
  - Multivariable
  - Constrained optimization
  - Iterative linear solvers; Conjugate gradients

## Topics II

Motivation

Representing Numbers

Exotic Representation

Error

- Interpolation and quadrature
  - Approximating integrals
  - Approximating derivatives
- Differential equations
  - ODEs: time-stepping, discretization
  - PDEs: Poisson equation, heat equation, waves
  - Techniques: Differencing, finite elements (time-permitting)

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

## Lecture

Numerics And Error Analysis

## Prototypical Example

Motivation

Representing Numbers

Exotic Representation

Error

```
double x = 1.0;
double y = x / 3.0;
if (x == y*3.0) cout << "They_are_equal!";
else cout << "They_are_NOT_equal.";
```

## Using Tolerances

#### Motivation

Representing Numbers

Exotic Representation

Error

Ovactical Aspects

```
double x = 1.0;
double y = x / 3.0;
if (fabs(x-y*3.0) <
    numeric_limits < double > :: epsilon)
    cout << "They_are_equal!";
else cout << "They_are_NOT_equal.";</pre>
```

### A Crucial Point

#### Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspect

# Mathematically correct

 $\neq$ 

# Numerically sound

Rarely if ever should the operator == and its equivalents be used on fractional values. Instead, some <u>tolerance</u> should be used to check if they are equal.

## Counting in Binary: Integer

Motivation

Representing Numbers

Exotic Representation

Error

$$463 = 256 + 128 + 64 + 8 + 4 + 2 + 1$$
$$= 2^{8} + 2^{7} + 2^{6} + 2^{3} + 2^{2} + 2^{1} + 2^{0}$$
$$\downarrow$$

1	1	1	0	0	1	1	1	1
$2^{8}$	$2^{7}$	$2^{6}$	$2^{5}$	$2^{4}$	$2^{3}$	$2^2$	$2^{1}$	$2^{0}$

## Counting in Binary: Fractional

Motivation

Representing Numbers

Exotic Representation

Error

$$463.25 = 256 + 128 + 64 + 8 + 4 + 2 + 1 + 1/4$$
$$= 2^{8} + 2^{7} + 2^{6} + 2^{3} + 2^{2} + 2^{1} + 2^{0} + 2^{-2}$$
$$\downarrow$$

1	1	1	0	0	1	1	1	1	0	1
$2^{8}$	$2^{7}$	$2^{6}$	$2^{5}$	$2^{4}$	$2^{3}$	$2^{2}$	$2^1$	$2^{0}$	$2^{-1}$	$2^{-2}$

### Familiar Problem

Motivation

Representing Numbers

Exotic Representation

Frror

Practical Aspects

$$\frac{1}{3} = 0.0101010101\dots_2$$

Finite number of bits

#### Fixed-Point Arithmetic

Motivation

Representing Numbers

**Exotic Representation** 

Error

1	1	 0	0	 1	1
$2^{\ell}$	$2^{\ell-1}$	 $2^{0}$	$2^{-1}$	 $2^{-k+1}$	$2^{-k}$

- Parameters:  $k, \ell \in Z$
- $k + \ell + 1$  digits total
- Can reuse integer arithmetic (fast; GPU possibility):

$$a + b = (a \cdot 2^k + b \cdot 2^k) \cdot 2^{-k}$$

# Two-Digit Example

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspect

$$0.1_2 \times 0.1_2 = 0.01_2 \cong 0.0_2$$

Multiplication and division easily change order of magnitude!

# Demand of Scientific Applications

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

$$9.11 \times 10^{-31} \rightarrow 6.022 \times 10^{23}$$

Desired: graceful transition

#### Observations

Mativation

Representing Numbers

Exotic Representation

Error

Practical Aspects

Compactness matters:

$$6.022 \times 10^{23} =$$

602,200,000,000,000,000,000,000

### Observations

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

Compactness matters:

$$6.022 \times 10^{23} =$$

602,200,000,000,000,000,000,000

Some operations are unlikely:

$$6.022 \times 10^{23} + 9.11 \times 10^{-31}$$

### Scientific Notations

 $\mathsf{Motivation}$ 

Representing Numbers

Exotic Representation

Error

Practical Aspect

# Store Significant digits

$$\underbrace{\pm}_{\text{sign}}\underbrace{(d_0+d_1\cdot b^{-1}+d_2\cdot b^{-2}+\cdots+d_{p-1}\cdot b^{1-p}))}_{\text{significand}}\times\underbrace{b^e}_{\text{exponent}}$$

• Base:  $b \in N$ 

• Precision:  $p \in N$ 

• Range of exponents:  $e \in [L, U]$ 

# Properties of Floating Point

Motivation

Representing Numbers

Exotic Representation

Error

- Unevenly spaced
  - Machine precision  $\epsilon_m$ : smallest  $\epsilon_m$  with  $1+\epsilon_m\ncong 1$

# Properties of Floating Point

Motivation

Representing Numbers

Exotic Representation

Error

- Unevenly spaced
  - Machine precision  $\epsilon_m$ : smallest  $\epsilon_m$  with  $1 + \epsilon_m \ncong 1$
- Needs rounding rule (e.g. "round to nearest, ties to even")

# Properties of Floating Point

Motivatio

Representing Numbers

Exotic Representation

Error

- Unevenly spaced
  - Machine precision  $\epsilon_m$ : smallest  $\epsilon_m$  with  $1 + \epsilon_m \ncong 1$
- Needs rounding rule (e.g. "round to nearest, ties to even")
- Can remove leading 1

### Infinite Precision

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

$$Q = \{a/b : a, b \in Z\}$$

- Simple rules: a/b + c/d = (ad + cb)/bd
- Redundant: 1/2 = 2/4
- Blowup:

$$\frac{1}{100} + \frac{1}{101} + \frac{1}{102} + \frac{1}{103} + \frac{1}{104} + \frac{1}{105} = \frac{188463347}{3218688200}$$

• Restricted operations:  $2 \mapsto \sqrt{2}$ 

# Bracketing

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

# Store range $a \pm \epsilon$

- Keeps track of certainty and rounding decisions
- Easy bounds:

$$(x \pm \epsilon_1) + (y \pm \epsilon_2) = (x + y) \pm (\epsilon_1 + \epsilon_2 + error(x + y))$$

Implentation via operator overloading

### Sources of Error

Motivation

Representing Numbers

Exotic Representation

Error

- Rounding
- Discretization
- Modeling
- Input

# Example

otivation

Representing Number

**Exotic Representation** 

Error

Practical Aspects

What sources of error might affect planets simulation?

### Absolute vs. Relative Error

Representing Numbers

Exotic Representation

Error

Practical Aspects

#### Absolute Error

The <u>difference</u> between the approximate value and the underlying true value.

### Absolute vs. Relative Error

NA -+i. .-+i -.

Representing Numbers

Exotic Representation

Error

Practical Aspects

#### Absolute Error

The <u>difference</u> between the approximate value and the underlying true value.

#### Relative Error

Absolute error divided by the true value.

#### Absolute vs. Relative Error

. . . . .

Representing Numbers

**Exotic Representation** 

Error

Practical Aspects

#### Absolute Error

The <u>difference</u> between the approximate value and the underlying true value.

#### Relative Error

Absolute error divided by the true value.

$$2~cm \pm 0.02~cm$$

$$2 \ cm \pm 1\%$$

# Relative Error: Difficulty

lotivatior

Representing Number

Exotic Representation

Error

Practical Aspects

**Problem**: Generally not computable

Relative Error: Difficulty

 ${\cal M}$ otivation

Representing Number

**Exotic Representation** 

Error

Practical Aspect

**Problem**: Generally not computable

Common fix: Be conservative

## Computable Measures of Success

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

# Root-finding problem

For  $f: \mathbb{R} \to \mathbb{R}$ , find  $x^*$  such that  $f(x^*) = 0$ 

**Actual output**:  $x_{est}$  with  $|f(x_{est})| \ll 1$ 

#### Backward Error

Activation 8 4 1

Representing Numbers

Exotic Representation

Error

Practical Aspects

### Backward Error

The amount the problem statement would have to change to make the approximate solution exact

#### Backward Error

lotivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

### Backward Error

The amount the problem statement would have to change to make the approximate solution exact

**Example 1**: 
$$\sqrt{x}$$

#### Backward Error

**Error** 

### Backward Error

The amount the problem statement would have to change to make the approximate solution exact

Example 1:  $\sqrt{x}$ Example 2:  $A\vec{x} = \vec{b}$ 

# Conditioning

lotivation

Representing Numbers

Exotic Representation

Error

Practical Aspect

### Well-conditioned:

Small backward error ⇒ small forward error

# Poorly conditioned:

Otherwise

Example: Root-finding

### Condition Number

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

#### Condition number

Ratio of forward to backward error

### Condition Number

Motivation

Representing Numbers

Exotic Representation

Error

Practical Aspects

#### Condition number

Ratio of forward to backward error

# **Root-finding example:**

$$\frac{1}{|f'(x^*)|}$$

#### Theme

otivation

Representing Number

Exotic Representation

Error

**Practical Aspects** 

Extremely careful implementation can be necessary

# Example: $\|\vec{x}\|_2$

Motivation

Representing Numbers

**Exotic Representation** 

Frror

```
double normSquared = 0;
for (int i = 0; i < n; i++)
normSquared += x[i]*x[i];
return sqrt(normSquared);
```

Motivation

Representing Numbers

Exotic Representation

Error

```
double maxElement = epsilon;
\\
for (int i = 0; i < n; i++)
maxElement = max(maxElement, fabs(x[i]));
for (int i = 0; i < n; i++) {
  double scaled = x[i] / maxElement;
  normSquared += scaled*scaled;
}
return sqrt(normSquared) * maxElement;</pre>
```

## More Involved Example: $\sigma_i x_i$
